

E1 — single line

This paragraph exists so that a highlight can sit in the middle of a line of ordinary text. Here is the predicted tracking error [[E1A]] and the sentence continues afterwards so the quad has text on both sides of it.

A second case with no comment at all: universe [[E1B]] appears bare.

Expected suffering ends here with convex programming [[E1C]]. The period after the sentinel is deliberate.

E2 — wrapping across lines

predicted tracking error, predicted beta,
style factor active exposure, issuer con-
centration and sector group exposures,
which is counter-productive when the
panel is small [[E2A]]

a directly adjacent passage sitting one
line below the previous one so that any
vertical bleed between them is detected
[[E2B]]

E3 — inline mathematics

Following McNeil, Frey and Embrechts, the location μ , scale s and degrees of freedom ν [[E3A]] are estimated jointly.

The retained set is K_{valid} [[E3B]] after filtering.

The constraint $\sum_{i=1}^n w_i R_i \leq \text{VaR}_\alpha$ [[E3C]] binds at the optimum.

E4 — ligatures

The portfolios hold short-term fixed income instruments [[E4A]] alongside equities.

An efficient offline workflow [[E4B]] is assumed throughout.

E5 — string encoding

The comment attached here carries accents and a non-Latin script: encoded comment [[E5A]].

This one is attributed to a named author: authored markup [[E5B]].

A sticky note belongs at the end of this sentence [[E5C]]. 

E6 — underline, strikeout, squiggly

An underlined phrase [[E6A]] and a struck out phrase ~~[[E6B]]~~ and a squiggly phrase [[E6C]] all appear in this paragraph.

E7 — two columns

Column one carries a fair amount of filler so that the highlight lands partway down and the two columns overlap vertically. This matters because a naive vertical sort will interleave the columns. Here is a highlight confined to the left column [[E7A]] and the column continues below it with more filler text to push the balance point further down the page than it would otherwise sit.

Column two also carries filler, positioned so that its lines sit at roughly the same heights as the left column's lines. Here is a highlight confined to the right column [[E7B]] followed by yet more filler so that the two columns end up of similar length and the vertical bands genuinely overlap each other.

E8 — rotated page

This page is rotated by ninety degrees. **A highlight sits on a rotated page [E8A]** here.

E9 — CropBox inset from MediaBox

The CropBox on this page is inset by twenty points on every side. A cropped page highlight
[[E9A]] sits here.

E10 — no annotations

This page carries no annotations at all and must be skipped silently.
