

IN1 — two annotations over the same words

Two highlights are made over **this one target phrase**, one after the other, at the same place.

IN2 — a reply to an annotation

A remark is made on **this target phrase** **[[IN2A]]** and then replied to using the viewer's own reply function.

IN3 — a review state on an annotation

A remark is made on **this target phrase** **[[IN3A]]** and then marked accepted using the viewer's own review function.

IN4 — the four text markup subtypes

One squiggly on this target phrase **[[IN4A]]**, one strikeout on ~~this other target phrase~~ **[[IN4B]]**, and one underline on this third target phrase **[[IN4C]]**.

IN5 — reader annotations that are not text markup

Three annotation types a reader can create that carry a comment and have no quads. Each goes in the blank space below its own paragraph, not over any text.

A typewriter or text-box annotation goes in the space beneath this paragraph.

A freehand or ink annotation goes in the space beneath this paragraph.

A rectangle or square annotation goes in the space beneath this paragraph.

IN6 — document furniture that must not be reported

A highlight on **this target phrase** [\[\[IN6A\]\]](#) shares its page with a form field and two links, all added by make.py. The two link targets are on their own lines below, in so that make.py can always find each phrase whole on one line.

The first link covers see the reference and nothing else.

The second link covers go back to page one and nothing else.

IN7 — a popup left open

A highlight on **this target phrase** [\[\[IN7A\]\]](#) whose popup window is left open when the file is saved.
